EDUCATION

Boston University

Boston, MA

Bachelor of Science in Computer Engineering, Concentration in Machine Learning | GPA: 3.6/4.0 Expected May 2028

- Minor: Business Administration & Management | Semester Abroad: University of Sydney (Jan – Jun 2026)
- Relevant Coursework: Data Structures & Algorithms, Software Engineering, Probability, Statistics & Data Science

EXPERIENCE

Software Engineering Intern

Jan 2026 – Present

Livelo

Sydney, NSW, Australia

- Cut Livelo's monthly software costs from \$1,800 to roughly \$150 by building a full-stack booking system (React, TypeScript, Supabase) that replaced Shopify, HubSpot, and Zapier
- Reduced manual processing time per booking from 30–45 minutes to 10 minutes by automating a workflow that previously required manual coordination across Asana, Shopify, and Zapier, covering 150–200+ orders/month
- Built an admin platform (Supabase, Stripe, Postmark, Auth0) used by 50+ partner locations to manage pricing, inventory, bookings, and order flow
- Built a real-time chat system (Aby) with persistence, notifications, read receipts, and file sharing in 2–3 weeks, launching to 50+ partner locations

Undergraduate Research Intern – Data Analytics

Sep 2025 – May 2026

PsychoLinguistics Lab, Boston University

Boston, MA

- Filtered 320 raw survey responses to 182 valid submissions and engineered 5 Moral Foundations Questionnaire subscores from 32 survey items using Python and pandas
- Compared moral foundation scores across a 26-person bilingual subsample (14 English, 12 Hindi speakers), finding English speakers scored higher on all 5 foundations, with results presented at the Eastern Psychological Conference

Undergraduate Researcher

Oct 2025 – Dec 2025

Human to Everything (H2X) Lab, Boston University

Boston, MA

- Collected motion-capture sensor data across 5 dog studies and cleaned/edited JSON files for 100+ motion clips to support an ML model of canine kinematics

IT Support Technician

Aug 2024 – Present

Boston University IT Help Center

Boston, MA

- Resolved 15–25 hardware, software, and account support tickets per shift via phone, walk-in, and email, logging each in ServiceNow

Logistics Team

Jan 2025 – Present

BostonHacks

Boston, MA

- Authored the Run of Show, a document detailing every minute of the Hackathon, for a 300+ student hackathon, coordinating workshop and vendor scheduling

Python Instructor

Apr 2021 – Aug 2025

Thinkland.ai

Remote

- Taught a Python curriculum spanning basics through object-oriented programming to 50+ students in grades 5–8 over 4 years, designing 1 applied project per term
- Recognized as a STAR Teacher, awarded to roughly 4–5% of instructors, for curriculum quality and weekly progress reporting

PROJECTS

DeepVerify | Rust, TypeScript, React, WebAssembly, Supabase, Cloudflare Workers

Jul 2026

- Diagnosed a self-hosted deepfake detector's 0% recall failure, replaced it with a CLIP-based classifier, and tuned the decision threshold to reach 94% recall and 79% accuracy on a 100-image test set
- Built a Rust reverse proxy that decouples media delivery from deepfake scoring, resolving a verification badge in ~2,000ms via an asynchronous background job, with results synced through Supabase

Noogie – Best Design @ PennApps XXVI | Python, TypeScript, React, Supabase, d3.js, OpenAI API

Sep 2025

- Built a web-scraping pipeline that collected and normalized 500+ articles daily for an AI-powered news platform, on a team of 3 people
- Developed a vector-similarity clustering algorithm to group 500+ daily articles by topic

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C/C++, Rust, Swift, HTML, CSS, MATLAB, Bash/Zsh

Frameworks & Technologies: Node.js, Express.js, React, Next.js, Firebase, Cloud Firestore, SciKit-Learn, Arduino

Tools: Git/GitHub, VS Code, Xcode, PyCharm, IntelliJ, Vercel, OnShape, Figma, Jira, ServiceNow, Microsoft Office
